

First period: 1st July 2022 to 30th June 2023

Introduction

This document forms the Qualifying Explanatory Statement to demonstrate that Virgin Wines Online Ltd, for the defined subject below, has achieved carbon neutrality for its operational Scope 1 and Scope 2 and Scope 3 emissions for the period commencing 1st July 2022 to 30th June 2023.

Section 1: General information

Entity making PAS 2060 declaration	Virgin Wines Online Ltd
Period during which the entity is demonstrating	1 st July 2022 – 30 th June 2023
achievement of carbon neutrality	
Subject of PAS 2060 declaration	This declaration applies to the scope 1, scope 2
	and scope 3 emissions of Virgin Wines.
	Emissions are defined using the GHG Protocol
	Standard, and the operational control
	approach. The GHG protocol is used to
	minimise uncertainty and yield accurate,
	constant and reproducible results. Our
	emissions mainly arise from three sources,
	emissions from upstream transportation,
	downstream transportation, and electricity
	usage.
Description of Subject	Virgin Wines is one of the UK's largest direct-to-
	consumer wine retailers, supplying high quality
	products coupled with excellent customer
	service and innovative ways of retailing.
	More than 90% of our wines by volume are
	exclusive to Virgin Wines.
	Virgin Wines operates in the UK only and
	employs over 190 people.
Defined subject	All business and facility operations occurring in
	the UK (that is our Norwich office, and Preston
	and Bolton warehouses).
	The storage, distribution, supply, use and final
	disposal of all products, and transport of
	39.80% of wines procured from overseas
	vineyards to our warehouses (covering a single
	supplier, Wine Fusion).
	Covering all employed a Cover of 2 and 2
	Covering all applicable Scopes 1, 2 and 3
	categories within the GHG Protocol with the
	following exclusions and inapplicable areas:

TAS 2000 Qualitying Explanatory Stateme	
	 Scope 3, Category 4, Upstream transportation, and distribution – currently limited to Wine Fusion products only when it comes to product importation (39.80% of FY23 wines) as it is not considered feasible for the full Category 4 emissions to be offset at this time. Scope 3, Category 10, Processing of sold products: excluded as not applicable to our business Scope 3, Category 13, Downstream leased assets: excluded as not applicable to our business Scope 3, Category 14, Franchises: excluded as not applicable to our business Scope 3, Category 15, Investments: excluded as not applicable to our business
Rationale for selection of the subject	For our second year we have included scope 1, scope 2 for which we have comprehensive and accurate data. As per the PAS 2060 recommendations, all Scope 3 emissions sources that are technically feasible and cost- effective to implement carbon neutrality are included in this declaration. Some categories that we have emission data for, would not be feasible for us to fully off-set. As such, only 39.80% of Scope 3, category 4 emissions relating to the importation of wine have been included.
	Categories 10, 13, 14 and 15 are excluded as they are not applicable.
Type of conformity assessment	Independent third-party verification
Baseline date for PAS 2060 programme	1 st July 2021 to 30 th June 2022
Scope of emissions footprint under claim	Scope 1, Scope 2, and Scope 3
Individual responsible for provision of data	Emily Revell
demonstrating carbon neutrality	PR, Purpose & Sustainability Manager
	Virgin Wines
	0

Section 2: Declaration of commitment of carbon neutrality

Virgin Wines is committed to carbon neutrality of scope 1, scope 2 and scope 3 emissions in accordance with PAS 2060 at X for the period commencing 1st July 2021 to 30th June 2022.

	-
Recorded carbon footprint of the subject during	1 st July 2022 to 30 th June 2023.

Section 3: Declaration of on-going commitment to carbon neutrality

Virgin Wines are committed to maintaining carbon neutrality for scope 1, scope 2, and scope 3 emissions in accordance with PAS 2060 for the period 1st July 2023 to 30th June 2024.

Section 4: Carbon footprint report

This carbon neutrality verification against the requirements of PAS 2060 is based on Virgin Wines' FY2023 emissions data applying operational control of boundary. Independent assurance of the emission sources contained in this declaration was obtained by NQA. All calculations were made in accordance with the Greenhouse Gas (GHG) Protocol using government published and best practice appropriate sub-regional, national, or international emission factors. These methods are widely recognised and recommended for the reporting of GHG emissions for PAS 2060. Materiality of the report is 5%.

Calculation methodology, quality, and verification

Reported emissions were calculated from FY2023 activity data consisting of invoices and metered consumption. The calculations undertaken were complete with all sources of Scopes 1, Scope 2 and Scope 3 included. Some categories that we have emission data for, would not be feasible for us to fully off-set. As such, only 39.80% of Scope 3, category 4 emissions relating to wine importation have been included.

Scope 1 emissions

Scope 1 emissions: 42.704 tCO2e

Scope 2 emissions

Scope 2 emissions: 48.099 tCO2e

Scope 3 emissions

As per the PAS 2060 recommendations, all Scope 3 emissions sources that are technically feasible and cost-effective to implement carbon neutrality are included in this declaration. As such, Scope 3 Category 4 is currently limited to Wine Fusion products only (39.80% of FY23 wines) as it is not considered feasible for the full Category 4 emissions to be offset at this time.

Scope 3 emissions: 1403.322 tCO2e

Total carbon footprint

The total carbon footprint for Virgin Wines across Scope 1, Scope 2, and Scope 3 for the achievement period 1^{st} July 2022 to 30^{th} June 2023 is 1,494.13 tCO2e.

	FY22	FY23	
Scope 1	52.103	43	
Scope 2	67.495	49	
Scope 3	2502.473	1,404	
Total	2622.07	1,496	

Year on year comparison

Section 5: Carbon Management plan

Virgin Wines are committed to achieving carbon neutrality for scope 1, scope 2, and scope 3 emissions in accordance with PAS 2060 for the period 1st July 2022 to 30th June 2023.

Virgin Wines' target is to maintain its carbon neutral status as it goes into FY24. We are just shy of our previous target to reduce Scope 1 and Scope 2 emissions by 25%. Having reduced them by 18.4% and 28.7% respectively i.e 24.1% overall. We reduced emissions across all three scopes overall by an impressive 43% and declared 11.8% more wine imports.

Carbon reduction plans

Virgin Wines are committed to maintaining carbon neutrality for scope 1, scope 2, and scope 3 emissions in accordance with PAS 2060 for the period 1st July 2023 to 30th June 2024.

Long-term we plan to shift to a strategic focus on insetting. Generating real change within our own value chain, with the aim to contribute to the carbon reduction of the wine industry as a whole. Virgin Wines also have a target with the SBTi (Science Based Target Initiative) to reduce our Scope 1 and Scope 2 GHG emissions by 42% by 2030 (from a 2021 base year). We also pledged to work on reducing Scope 3 emissions.

In the short-term Virgin Wines target for the next year (FY24) is to reduce emissions across Scope 1 and Scope 2 and Scope 3 in absolute terms by a 2% and to reduce Scope 3 in absolute terms by 4%.

To achieve this, we will:

- Reduce bottle weights. Bottle weight is one the biggest contributors to high carbon emissions for the entire wine industry. We plan to sign up to a collaborative Bottle Weight Accord with the Sustainable Wine Roundtable which should see our Scope 3 emissions reduce significantly. The issue is we haven't previously logged wines we do ship in bottle as wouldn't be feasible for us to offset.
- Continue to ship as much of our range in bulk as possible.
- Make our boxes from 100% recyclable card and look to remove the plastic/foil stents from top of wines.
- Launch internal campaigns to power off lights and electrical equipment when not in use.
- Improve waste management in our Norwich offices to improve recycling rates.
- Continue to encourage hybrid working for our staff, and the continued use of virtual meetings with external partners.
- Continue to review partners and suppliers we work with based on their own sustainability credentials.

Section 6: Carbon offsets

CO2e emissions to be offset

Through the United Nations Carbon Offset Platform, 3,362 tCO2e standard certified offsets were purchased and validated. This totalled the calculated Scope 1, Scope 2, and Scope 3 emissions.

Virgin Wines is committed to retaining carbon neutral status for the next financial year (FY23). Offset schemes will be carefully selected from recognised certification schemes. Going forward the scope of carbon neutrality and offsets purchased will at least match this year's carbon footprint boundary and may possibly extend to include further suppliers with scope 3.

For FY23 we've offset a further 746tCO2e via Highland Carbon.
